

Saumya Dwivedi

+91 9519819643 | saumyadwivedi1904@gmail.com | [LinkedIn](#) | [GitHub](#)

Full-stack engineer building AI-powered agentic workflows and scalable applications. Proficient in JavaScript/TypeScript, React.js, Node.js, and PostgreSQL, with hands-on experience in REST API design, agile sprints, and production-grade CI/CD deployment. Strong interest in AI/ML-driven automation.

EDUCATION

VIT Bhopal University <i>B.Tech in Computer Science (9.07 CGPA)</i>	Bhopal, MP <i>Sep 2023 – May 2027</i>
The Jain International School <i>Intermediate, CBSE (86.4%)</i>	<i>Mar 2023</i>
Ryan International School <i>Matriculation, CBSE (96.66%)</i>	<i>Mar 2021</i>

EXPERIENCE

FOSSEE Summer Fellow <i>IIT Bombay</i>	May 2026 – Present
- Selected for the prestigious FOSSEE Summer Fellowship 2026 under the eSim domain at IIT Bombay. - Architected Kubernetes deployment infrastructure enabling the Django, Celery, PostgreSQL, and Redis services platform to scale simulation workloads reliably across multiple tenants, delivered through Agile sprints. - Building a Dynamic Pod Orchestration System for eSim with a custom pod manager to provision ephemeral simulation pods from templated specs, reducing manual setup overhead for new simulation workloads. - Implementing CPU/memory resource limits across pods to ensure workload isolation in a multi-tenant environment, preventing any single simulation job from degrading platform-wide performance.	

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript C++, Java, SQL, HTML5, CSS3
Frontend: React.js, Next.js, HTML5, CSS3, React Flow
Backend: Node.js, REST APIs, MVC Frameworks, FastAPI, Django, Flask, JWT Authentication
Databases: PostgreSQL, MongoDB, MySQL, Redis
DevOps & Tools: Git, CI/CD, GitHub Actions, Docker, Kubernetes
AI & ML: Gemini API, LLM Integration, PyTorch, TensorFlow, scikit-learn, SHAP

PROJECTS

Archon - AI Codebase Intelligence Platform <i>TypeScript, Next.js, Node.js, MongoDB, React Flow, Gemini API</i> GitHub Live Demo	June 2026
- Large codebases hide structural risks that generic AI cannot parse; built Archon to instantly convert any GitHub URL into a fully parsed, visualized, and AI-explainable dependency map. - Engineered a custom static-analysis pipeline (AST parsing, DFS cycle detection, complexity scoring) rendered as an interactive React Flow graph with dynamic layouts and click-to-focus isolation for 300+ file repositories. - Built an AI agent (Gemini-powered) for graph-grounded codebase chat and automated fix suggestions, orchestrated via async pipeline (Socket.IO, JWT/OAuth), deployed on Render with GitHub Actions CI/CD.	
ChurnGuard – Customer Churn Prediction System <i>FastAPI, Streamlit, MongoDB, SHAP, scikit-learn</i> GitHub Live Demo	Mar 2026
- SaaS businesses typically catch churn only after revenue is unrecoverable; engineered Churn Guard to flag at-risk customers early and automate proactive intervention workflows for business teams. - A raw probability score isn't actionable; integrated SHAP explainability and optimized model thresholds (AUC 0.835) to surface clear, per-customer churn drivers through a scalable Streamlit UI. - A churn score alone tells a business team nothing actionable, layered in SHAP explainability to surface the top drivers behind each prediction, turning a bare number into a clear, per-customer reason teams can act on. - Designed a production-grade FastAPI backend for bulk scoring (1000+ customers per API call), featuring robust REST APIs, strict validation, and MySQL integration for seamless, high-performance deployment.
